

$$S_1 = 1 + \frac{1}{2} + \underbrace{\frac{1}{4} + \frac{1}{4}}_{\frac{2}{4} = \frac{1}{2}} + \underbrace{\frac{1}{8} + \frac{1}{8} + \frac{1}{8} + \frac{1}{8}}_{\frac{4}{8} = \frac{1}{2}} + \underbrace{\frac{1}{16} + \dots}_{\frac{8}{16} = \frac{1}{2}} + \dots$$

$S_1 = \infty$ S_1 "diverges"

$$S_2 = 1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5} + \frac{1}{6} + \frac{1}{7} + \frac{1}{8} + \frac{1}{9} + \dots$$

$S_2 = \infty + 1$ $S_2 > S_1$ S_2 "diverges plus one"

Let $f(n) = n^2$, and g is child of f .

What is $g(10)$?

→ true for any child

$$g(10) = f(1) + f(2) + f(5) + f(10)$$

Now fill in using $f(n) = n^2$.

$$\begin{aligned} g(10) &= 1 + 4 + 25 + 100 \\ &= 130 \end{aligned}$$
